

PRESS RELEASE

NANOGUN-MV, the SAMES new electrostatic gun

December 1st 2014

High technologies in hand!

NANOGUN-MV™ is SAMES brand new electrostatic gun. It has specially been designed for spraying liquid paints in low pressure way in many markets such as aerospace, agricultural & construction, metallic furnitures, wood and automotive industries.

NANOGUN-MV™ differentiates itself by its low weight and ergonomic, improving the operator's comfort. The innovative design of the gun, of its **GNM6080** control module and the quality of the selected components ensure reliability and performance of whole equipment.

User friendly, easy to use, **GNM6080** control module also combines advanced corrective and preventive maintenance features. These additional assets ensure to get the best of the production tool.

Moreover, thanks to their colourful design, **NANOGUN-MV™** and **GNM6080** control module increase dynamism and visibility in the factory.

NANOGUN-MV™ innovates through its exclusive electrostatic properties. Associated with the patented Super Vortex® spraying technology, **NANOGUN-MV™** provides even higher transfer rates with an unrivalled finishing quality.

Paint savings are thus achieved and they contribute to a fast payback while protecting the environment

NANOGUN-MV™ is a concentrate of high technologies for optimum results, both in quality of finish and in costs' production control.

About SAMES:

SAMES is expert in finishing solutions. For more than 60 years, SAMES offers a wide range of spraying solutions dedicated to the protection of materials and applications of powder and liquid paint. SAMES designs, manufactures and commercializes turn-key systems supplier for painting application either manual or robotic, so as to provide to the Automotive and General industries with the best. In France and through 16 worldwide subsidiaries, SAMES will help you to remain competitive.
